

Orca race case — Beta Checkpoint

Agent Builders Cup · Hummingbot · Deadline EOD 2026-09-30 · Entry freeze 2026-10-01 · Race 2026-10-06

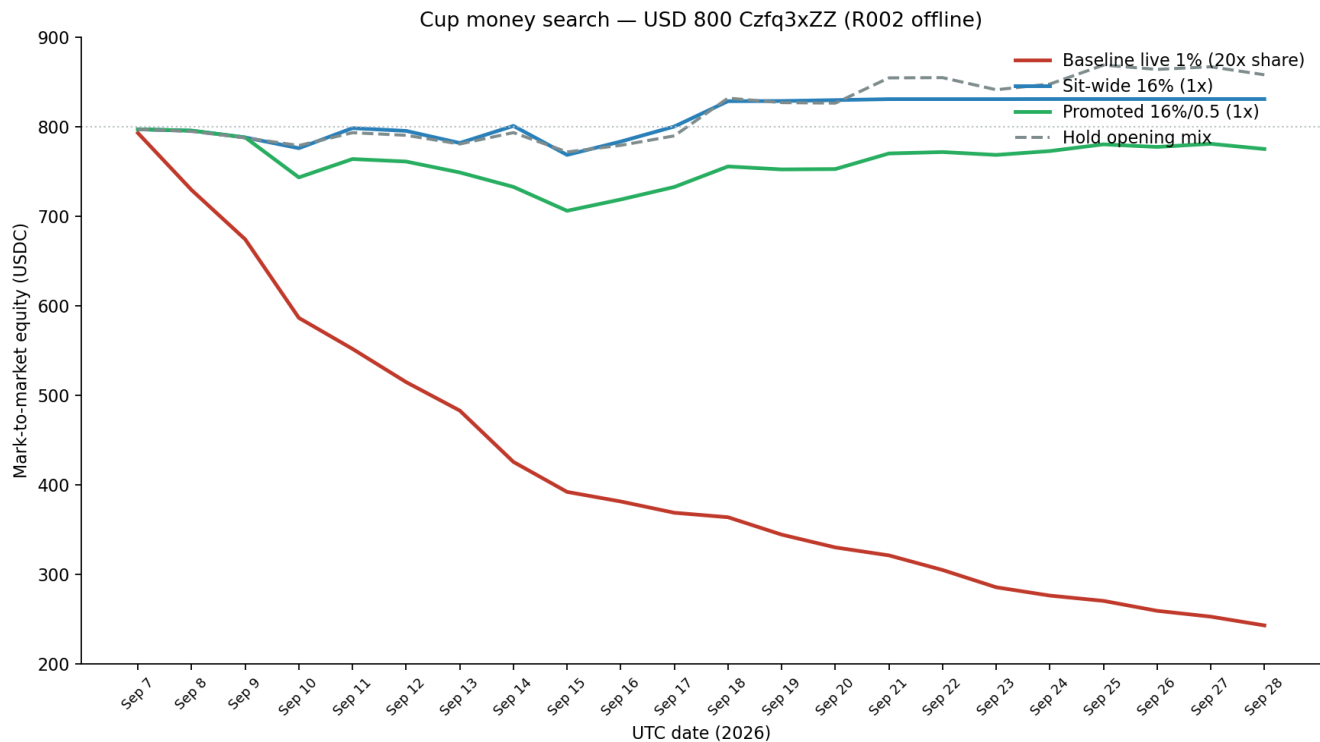

Ask: Select us to race for **Orca** with a wide-band SOL/USDC Whirlpool LP (16% width / 0.5 threshold on Czfq3xZZ...). Official Hummingbot lp_rebalancer + Gateway. Deterministic. LLM does not trade.

Simulation no-loss gate (hard)

Losing money in simulation is a no-go. Same Gecko hourly path, \$800 start, 1× share:

Config	Holdout end	PnL vs \$800	Verdict
Tight 1.0 / 0.05 (old)	\$243	-\$557	NO-GO
sit_wide 16% (open once)	\$825	+\$25 (train +\$29)	PASS both windows
Race 16% / 0.5	\$824	+\$24	Holdout PASS
R003 Czfq holdout	\$830	+\$30 (+\$9 vs HODL)	PASS*

* R003 fees use constant-TVL approximation.

Source: GeckoTerminal hourly OHLCV · research/cup_money_search.py · Simulation only

Figure: cup-800-sim canvas render — baseline destroys the book; wide/rare-recenter stays near hold.

Why Orca / why this shape

- **Venue:** Self-custodial Solana DEX — legal for a US person (no Gate/Bitget/HL).
- **Falsified prior:** Tightening the band multiplies fees *and* LVR — 1% band recentered 1,224× and finished at \$243.
- **Working shape:** 16% full width, 0.5 threshold $\approx$ sit-wide economics; holdout +\$24 absolute.
- **Pool:** True tokensBothOf=SOL, USDC — only Czfq clears TVL $\geq$ \$500k for an \$800 deposit (R003).
- **Volume (40%):** Fees-implied traded volume — own open/close swaps do not inflate score.
- **Live proof:** R003m (\$100, 16/0.5) started 2026-09-28 after cancelling tight-band T016. Race YAML quote 800.
- **ML:** Intensity ridge is shadow-only until more snapshot days — not used for acting.
